

# Pressure Reducing Valve

RGP-1F

A kind of a relief valve or a self-actuating adjustment valve for maintaining the pressure of instruments or pipelines by exhausting excessive pressure according to load variation. This is widely used for a valve for adjusting the pressure of cold or warm water in an air conditioning or a heating/cooling facility of medium- and high-rise buildings.

<b>Working Pressure</b>	10kgf/cm <sup>2</sup> or lower
<b>Adjustment Range</b>	0.5~8kgf/cm <sup>2</sup>
<b>Working Temperature</b>	Max 120°C
<b>Working Fluid</b>	Water, Oil, Air
<b>Type</b>	Piston Type
<b>Connection</b>	JIS 10K Flanged
<b>Materials</b>	Body: Ductile Iron
	Trim: Bronze, Synthetic Rubber
